

Always Ready to Fly: Solve the Check-In Document Challenge

Growing passenger volumes. Evolving regulations. More document types. Rising penalties. Your airline needs to shift travel document checks from airport friction to digital convenience.

The right solution means:

- ✓ More self-service document scans
- ✓ More passengers ready to board
- ✓ Less friction at the airport
- ✓ Happier travellers
- ✓ Better compliance

Double the number of passengers ready to board before airport arrival

Scandit ID Bolt lets passengers effortlessly scan passports, visas, and unstructured travel documents through your website – reducing check-in bottlenecks, compliance risks, and improving their journey.

The travel document challenge is intensifying

Airlines operating global routes face mounting complexity:

Passenger frustration

Low digital completion rates due to poor scanning, UX friction, and misunderstanding of document requirements result in partial document checks = friction, last-minute issues, denied boarding, and NPS damage.

Operational bottlenecks

Manual document checks at check-in and boarding are error-prone, slow, and resource-intensive.

Regulatory pressure

EES, ETIAS, ETAs, and constantly shifting entry requirements across countries increase compliance obligations and penalties.

Growing volume

Millions of passengers across multiple touchpoints and channels require consistent, automated compliance flows end-to-end.

Financial risk

Fines for transporting ineligible passengers, incomplete API data, and repatriation costs add up fast.

You need to verify documents early and accurately to avoid airport issues.

Fast, foolproof **document scanning** at booking and check-in

ID Bolt embeds easy, accurate, comprehensive document capture directly into your digital touchpoints

ID Bolt is a pre-built, fully compliant document scanning solution that integrates into your booking flow and online check-in via your website.

Scan any travel document

ICAO-compliant passports and visa stickers

AI-powered extraction of E-visa confirmations, invitation letters, vaccination certificates and more

Improve scanning UX and accuracy

Scan in 1 second with up to 100% accuracy.

Reduce API error and omissions

Automate data capture, confirm correct document type and travel readiness.

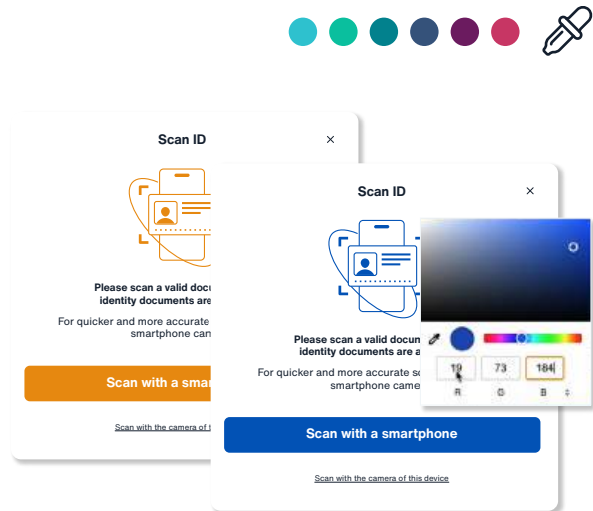

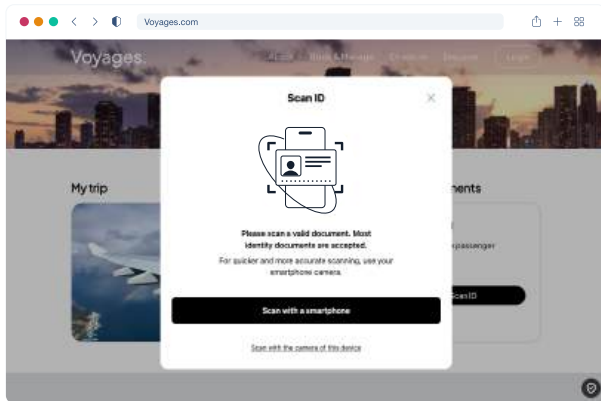

Easy to integrate, works on any device

Device handover for seamless laptop-to-mobile, rapid integration into existing environment.

Built for airline operations and passenger trust

Your brand, your control

White-label customization – update colors, fonts, logos, and messaging without coding. Passengers experience ID Bolt as native to your airline, not a third-party handoff.

Proven at scale

Handles passengers at scale across multiple touchpoints and channels with consistent, automated compliance flows.

Enterprise-grade security

Data flows directly to your systems – Scandit never collects PII

ISO 27001 certified

GDPR, CCPA, and sector-specific compliance built-in

Airline results

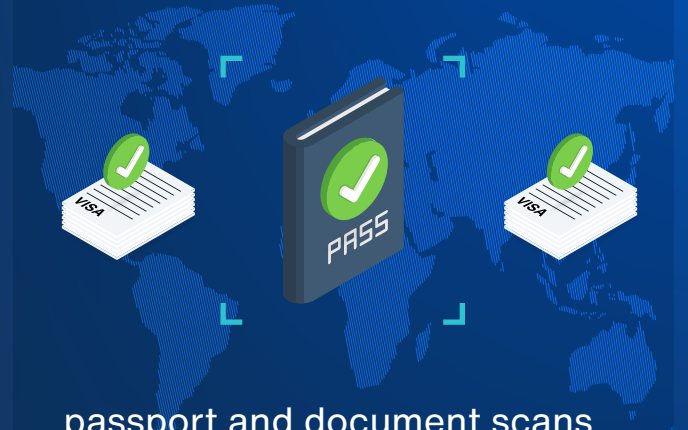

2x

double amount of passengers needing no additional document checks at the airport
